PROFESSIONAL SUMMARY

Senior Software Engineer and Architect with an eye for design and 15+ years shipping production software across the full stack of technologies in many roles. Resilient with a focus on communication in this new AI era, and a love for making things people want to work with. Proven track record of hitting deadlines, training engineers, and developing systems to coordinate across teams for their best work.

EXPERIENCE

Freelance Software Engineer (Remote) New York, New York
Senior Software Engineer and Architect March 2026 – Present

- Developed strategy for engineers and leaders to work more effectively with AI, including building agents for code verification, and coming up with workflows that give us the most power with AI development, and still allow other developers to contribute.
- Implemented a CI/CD pipeline for the project including lint, build, compile, unit tests, and smoke tests, using GitHub Actions and Vercel / Supabase to monitor the health of pull requests and the repo.
- Implemented profiling
- Worked with CTO and CEO to implement and document a new agile development workflow that removed roadblocks, streamlined testing, and simplified deployment and increased productivity by 12% while also giving leadership more insight into work ability.

Conductor Inc. (Remote) New York, New York
Senior Frontend Engineer and Architect October 2021 – January 2026

- Developed a POC for an AI/LLM powered React WYSIWYG editor that grew into a product that increased revenue by ~$2.5M annually and monthly active users by ~45K.
- Designed, built, and maintained several user facing web applications, and features, ensuring security performance and scalability of systems for WYSIWYG editor allowing users to manage their content on websites
- Collaborated with Data Scientists, Designers, Product Managers, backend Engineers, and C suite staff to deliver high quality user experiences.
- Led performance improvement effort on web application developing strategies to profile, and coming up with solutions with other engineers to bring page load time to sub 3 seconds
- Implemented and improved new Micro-frontend architecture on legacy Monolith React apps enabling new feature development and reducing continuous integration build time by 50% and allowing developers to positively contribute to the health of the repository.
- Contributed to the full Software Development lifecycle including technical design, development, testing, experimentation, analysis and deployment (launch).

FlyPilot (Remote) New York, New York
Staff Software Engineer and Architect September 2016 – September 2021

- Set and defined standards that improved developer workflows, recommended and implemented best practices along with helping to coach and mentor engineers on the team to further their professional development.
- Led a team of 15 engineers to develop 100+ projects with a 95% on time rate for projects, leveraging agile development practices to ensure on time delivery across platforms (web, tv, mobile, desktop) and languages (php, java, python, node.js).
- Met with clients to help understand projects, limit scope and plan the development for projects end to end, from simple POC's to complete web apps.
- Designed and implemented an engineering / design system with documentation to allow for quick building of over 200 different projects and for designers to see what tools were available, while facilitating engineers to rapidly prototype applications.

Elastic (Remote) Cupertino, California
Senior JavaScript Engineer & Architect February 2015 – August 2016

- Led major refactoring initiative that reduced Kibana codebase by 30% while adding features, improving build times by 40% and making onboarding 2x faster for new contributors, as measured by time-to-first-PR.
- Optimized rendering performance for dashboards displaying 10,000+ data points, reducing load times by 60% through canvas-based rendering and virtualization techniques.

Liquidnet, Medialets, RetailMLS, Something Digital, Appetude New York, New York
Senior JavaScript Engineer & Architect February 2010 – August 2014

- Lead Frontend Engineer, Liquidnet: modernized a web 2.0 institutional trading application, improving UI/UX, speed, and code integrity; set frontend strategy and partnered with backend engineers on design and testing.
- JavaScript Engineer, Medialets: architect and lead frontend contributor on Servo, a Backbone/Marionette single-page application.
- Web Developer, Something Digital: built client web experiences on WordPress and other content management systems. Earlier, I wrote a JavaScript MVC framework for the Appetude application.

LEADERSHIP

Parallel 18 San Juan Puerto Rico - Advisor / Mentor for growing startups Advising on Architecture and User Experience Design

Boy Scouts of America - Senior Patrol Leader, Assistant Scout Master - Mentoring and leading young men through their scouting adventures.

PROJECTS

Forge Gym Management (https://forge.aikazi.com alpha version**)** - Scheduling, Contracts, Payment, and Reporting AI built and designed with my guidance to help small gyms manage their clientele.

SKILLS

Software - React, Next.js, JavaScript / TypeScript (ES6), CSS, Node.js, Express, GraphQL, REST, Redux, D3.js, Python, C, Bash, WASM, Jest, Cypress, GitHub Actions, HTML, CI/CD, http/https, API Design, Vercel, Supabase, Spinnaker, SQL / MySQL/ PostgreSQL, Docker, DigitalOcean, DataDog, Salesforce, Git, Unix / Linux, SDLC.
Practice: User Experience Design / Development, Accessibility (WCAG / ARIA), Testing strategy (Jest / Cypress, integration, unit & e2e), CI/CD (GitHub Actions), Containerization and image builds (Docker), Cloud infrastructure (DigitalOcean), Monitoring and event instrumentation (DataDog, Google Analytics, umami), Relational data modeling (SQL / MySQL), A/B testing & experimentation, Authentication & CORS, Technical project management, AI-assisted development tooling, Scrum management, Agile development, Solution Design & Evaluation, Micro-frontend architecture, Design systems.

EDUCATION

Brooklyn Technical High School **Class of June 2009**
Computer Science Major - Java AP 100%

New York City Tech **2009 - 2011; 15 credit hours**
Computer Science Major

INTERESTS & ACTIVITIES

Boy Scouts of America, Cycling, Origami, Muay Thai, Camping.
